NOTES TO USERS

does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

o obtain more detailed information in areas where Base Flood Elevations (BFEs) and/or floodways have been determined, users are encouraged to consult the Flood Profiles and Floodways Date and/or Summay or Billware Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies the FRML Users and both date wave that BFEs shown on the FRMI representations and the study of the BFEs study or the FRMI report rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation date presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or blooglain management.

Constat Base Flood Elevations shown on this map apply only landward of O/N north. American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that costal flood elevations are also provided in the Summary of Sillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Sillwater Elevations table should be used by construction and/or floodplain management purposes when they are higher than the elevations shown on the FiRM.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

The projection used in the preparation of this map was Universal Transverse Mancator (UTM) Zone 124. The horizontal datum was NA 03.8 GHz and of FIRMS for algorithms of FIRMS.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical altitum. For information regarding conversion between the National Geodetic Vertical Datum of 1920 and the North American Vertical Datum of 1938, visit the National Geodetic Curvey website at http://www.ngs.ncaa.gov or onstact the National Geodetic Survey at the following address:

NUAA, NINGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles produced at a scale of 1:12,000 from photography dated 1992 or later.

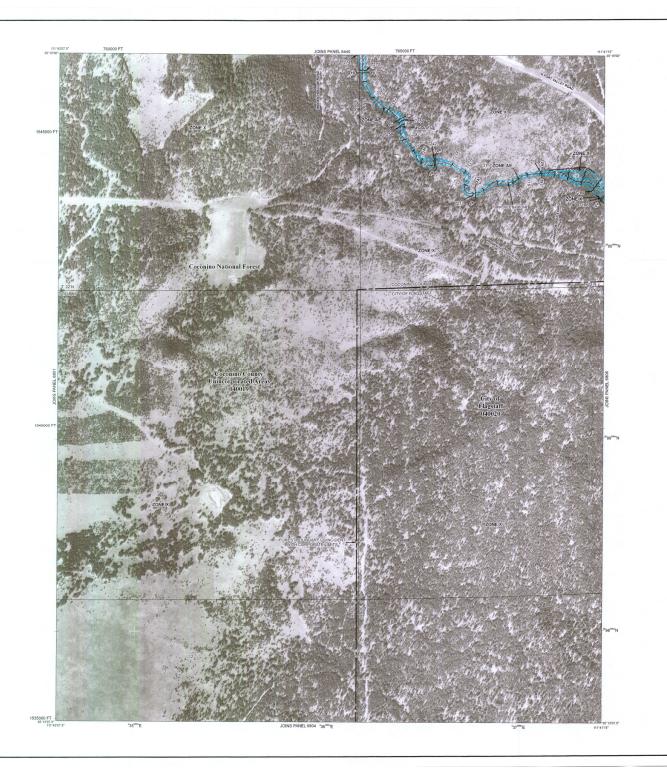

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this juridiction. The floodplans that floodplans that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodray Data tables in the Flood Instance Study Report (initial custation auditoritative hydrautic date) may reflect atteam channel distances that differ from whall is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this may was published, map users should contact appropriate community officials to verify current corporate limit for ations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panets; community map repostory addresses; and a Letting of Communities table containing National Flood insurance Program dates for each community as well as a listing of the panels on which each community is bottom.

On Which each communities a source—
Contact the FEMA Map Service Center at 1-800-358-9916 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or oigsal versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-900-358-9620 and its velbals of High-Yorks Mina polymics.

If you have questions about this map or questions concerning the National Flood insurance Program in general, please call 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

LEGEND

ZONE X

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, it the flood that has a 1% chance of being equiled or scoeded in any plane year. The Special Road Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Road Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Road Hazard India Zones A, AE, AH, AO, RA, 899, V, and VII. The Base Road Blevation is the water-surface deviation of the 1% annual chance flood.

ZONE A No Base Flood Flevations determined.

ZONE AE Base Flood Blevations determined. ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined. ZONE AO

Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations Coastal flood zone with velocity hazard (wave action); no Base Flood Bevations determined.

Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. OTHER AREAS

Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs) PAs are normally located within or adjacent to Special Flood Hazard Ares

0.2% annual chance floodplain boundary

Zone D boundary

Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
